

Housings

*Modular Design
Vending Machine Housing*

Reliability

First and Foremost

Vending machine housings made up of construction kit modules

The concept:

The modular system can be combined to house a bank of vending machines. Even encasing machines over corners is not a problem. Whether free-standing or wall-mounted Sielaff offers you a modular design housing system comprising around 30 individual components.

Technical Details:

Dimensions : 870 mm for narrow machines
1140 mm for wide machines

Panels: Intermediate sizes are compensated for by using infill panels. Varying machine heights are balanced out by the upper panels

Empties return unit: For returning empties (illumination comes as standard with roof projection) an internal width of 1140 mm is available

Material: Galvanised, powder enamelled sheet

Optional décor: If required, decorative panels between the individual components can be encased in stainless steel or wood

Whether you want a more detailed brochure, or a quotation which is individually tailored to suit you, talk to us.

*We reserve the right to make any technical changes.
The design shown on the front page was custom built for a specific client*
